

Experience

Fixit / Founding Software Engineer

September 2025 Present

- Built a security agent that continuously monitors the entire system and flags security issues in real time.
- Built an agentic AI flow for lead management using LangChain & LangSmith.
- Implemented observability using Axiom and feature flags across the system; ramped up on Kubernetes.
- Module owner for the Agent and Worker (consumer) services.

AFFINSYS AI / SDE Intern (LLMs & backend)

January 2025 August 2025

- Built a recommendation system for banks using LLMs (OpenAI, Anthropic) and VectorDBs to suggest financial products to user groups and identify target users for specific products.
- Architected a clickstream data collection service (schema design, full backend) using SQL, Django, PostgreSQL, Redis, WebSockets, Celery, RabbitMQ/Nats.io, OpenAI, Anthropic, and QdrantDB.
- Engineered loan disbursement (initial/multi-tranche) and auto-repayment workflows using Django & Celery, while managing corresponding accounting entries for accurate financial tracking.

BioChatter (EMBL) / Open Source Contributor

March 2025 April 2025 | [GITHUB](#)

- Built a production-ready LLM abstraction layer for biochatter to unify interaction with multiple providers (OpenAI, Anthropic, etc) via LiteLLM and LangChain; architected extensible API for corrective agents and RAG integration.
- Implemented a robust LLM orchestration class supporting token usage tracking, dynamic model selection, semantic response parsing, error handling for diverse chat APIs; wrote unit tests for reliability.

PWSkills / Machine Learning Intern

July 2024 July 2024

- Developed an NLP classifier for BBC News using 2,225 articles (1,490 train / 735 test), achieving 92% accuracy; produced **HLD**, **LLD**, **wireframes**, **architecture diagrams**, and **detailed reports**, saving the editorial team upto 50 hours/month.

Projects

Chicken Disease Classification

/ Python, Flask, GitHub Action(CI/CD), EC2, ECR, Docker, MLOPS | [Github](#)

- Orchestrated a TensorFlow-based **CNN classifier** with **VGG16** architecture for detection; automated data ingestion, preprocessing, and model lifecycle stages using **DVC**, including data augmentation and custom preprocessing in a full ML pipeline.
- Deployed a **CI/CD** workflow via **GitHub Actions** (linting, tests, Docker builds); containerized and deployed on **AWS EC2** using **ECR** for real-time inference, secured with **AWS Secrets Manager** and **GitHub Secrets**.

Education

Vellore Institute Of Technology (VIT, Vellore)

B.Tech, Computer Science / 2025

CGPA: 9.15 / 10.0

Army Public School

Class 12th : 92.4% / 2020

Class 10th : 92.6% / 2018

Skills

Languages

Python • C/C++ • Java

Technology

LLM • AI/ML • Agentic AI •
LangChain • LangSmith • SQL •
PL/SQL • AWS • DBMS •
PostgreSQL • Git/Github • Linux •
OpenCV • NLP • Flask • Springboot
• Django • FastAPI • Computer
Networks • OS • Websocket • System
Design • Message Queue
(RabbitMQ/Nats.io) • Redis • Celery •
Docker • Kubernetes • CI/CD •
GitHub Actions • Axiom • Feature
Flags • Observability • Tensorflow •
Pytorch • Numpy • Pandas • Vector
Databases (QdrantDB) • Feature
Engineering • REST • MLOps

Certifications

Data Science Masters / PWSkills

AWS Solutions Architect / AWS

AWS Cloud Practitioner / AWS

Achievements

- Won Intel GenAI Hackathon 2024 among 1000+ participants with **NeuroAssist** ([Github](#)), a solution for neural disease diagnosis.
- Keynote speaker in Offline IOT workshop.
- Led 20+ technical initiatives as Chairperson, ISA-VIT.
